

Palbociclib 125 mg Capsule

Product Information :

Pharmaceutical form : Capsule

Category : Anti Cancer

Pack : 21 Capsules

Brand name : Palbociclib 125 mg Capsule

Content : Palbociclib 125 mg

Therapeutic Use : Breast Cancer

Product Description :

What is Palbociclib 125 mg Capsule?

Palbociclib 125 mg capsule is used in conjunction with

anastrozole,

exemestane, or

letrozole

to treat a specific type of hormone receptor-positive, advanced breast cancer (breast cancer that depends on hormones like estrogen to develop) or breast cancer that has developed to other areas of the body system in women who have undergone menopause (change of life; end of monthly menstrual periods) or in men. Additionally, palbociclib is used in conjunction with

fulvestrant

to treat a specific type of advanced hormone receptor-positive breast cancer or breast cancer that has developed to other areas of the body in patients who have already received

treatment with an antiestrogen drug like tamoxifen. Palbociclib belongs to the group of drugs known as kinase inhibitors.

How to Use Palbociclib

- Palbociclib is available as a capsule to swallow. Usually, it is taken every day for the initial 21 days of the 28-day course with food. The frequency of this cycle's repetition will be determined by your doctor.
- It should be taken every day at about the same time(s). Ask your doctor to clarify any instructions you do not understand, and carefully follow the instructions on your prescription label.
- Palbociclib 125 mg capsule should be taken exactly as prescribed. Never take it in larger or fewer amounts or more frequently than directed by your doctor.
- Swallow the capsules whole; do not open, chew, or crush them. Do not take capsules that are broken or cracked.
- Don't take another dose of palbociclib if you vomit after receiving it. Continue taking your medication as usual.

How It works?

Palbociclib is a cancer-prevention drug. Downstream signaling pathways that promote cell proliferation are cyclin-dependent kinases 4 and 6, which act as chemical messengers. This medication stops the cancer cell cycle (the process of cells developing) by blocking cyclin-dependent kinases 4 and 6. By interfering with the cell cycle, it also targets breast cancer cells that have estrogen (hormone) receptors.

Precautions for Palbociclib 125 mg Capsule

- If you have an allergy to palbociclib, any other drugs, or any of the inert substances in the palbociclib capsule, let your doctor know right away.
- Inform your doctor about all prescription and over-the-counter drugs, vitamins, dietary supplements, and natural remedies you are now taking or intend to use.
- If you have diabetes, kidney, or liver problem, let your doctor know.

- Be sure to let your doctor know if you're nursing a baby or pregnant. The fetus could be harmed by palbociclib. If you are taking Palbociclib, you should not breastfeed.
- You should be aware that this drug may reduce male fertility. The potential risks of using palbociclib should be discussed with your doctor.
- During or soon after your treatment, let your doctor or dentist know if you need to have surgery, including dental surgery.

Side Effects of Palbociclib

Palbociclib might have undesirable effects. If any of the following symptoms are serious or do not go away, let your doctor know right away:

- Nausea
- Diarrhea
- Vomiting
- Reduction in appetite
- Taste changes
- Tiredness
- Tingling or numbness in your legs, arms, feet, or hands
- A painful throat, mouth, or lips
- Odd hair loss or thinning
- Having dry skin
- Rash

Some adverse effects can be very harmful. Call your doctor right away if you notice any of these signs:

- Indications of illness such as fever and chills
- Breathing difficulty
- Dizziness

- Irregular heartbeat
- Weakness
- Uncommon bruising or bleeding
- Nosebleeds

You should keep in mind that your doctor recommended this drug because she or he thought it would benefit you more than it would harm you. Many users of this medicine report no significant negative effects.
