Category : Anti Cancer

Pack : 1*10 TABLETS

Brand name : Letrozole 2.5mg Tablet

Content : Letrozole 2.5mg

Therapeutic Use : It helps to treat breast cancer in post-menopausal women.

Product Description :

What is Letrozole 2.5mg Tablet?

Letrozole 2.5mg Tablet is used in the treatment of early breast cancer in women who have undergone menopause (a change in life; a halt of monthly menstrual cycles) and have undergone other forms of treatment, such as radiation therapy or surgical removal of the tumour. Additionally, it can be used for those who have advanced breast cancer to prevent the tumour from migrating to other body regions. The drug letrozole tablet is effective in treating infertility. It is also prescribed to women who have been taking the drug tamoxifen for at least five years. Letrozole belongs to the group of drugs known as non-steroidal aromatase inhibitors.

How Letrozole Tablet Works?

Letrozole tablet is used as an aromatase inhibitor. It functions by reducing the body's production of oestrogen (female hormone). Some breast cancers are depended on oestrogen for growth may be slowed or even prevented from growing by this reduction in oestrogen. Additionally, it helps with infertility by increasing the hormones' ability to trigger the ovaries' release of eggs through a process known as stimulation of hormone release.

Letrozole - How To use?

- Letrozole is available in tablet form to use with or without food once daily. Take letrozole

2.5mg tablet every day around the same time.

- Ask your doctor to clarify any instructions you do not understand, and carefully follow the instructions on your prescription label.
- Follow the medication instructions precisely when taking letrozole. Never take it in larger or fewer amounts or more frequently than directed by your doctor.
- Letrozole may be required for a lengthy period of time, even several. Even feeling fine, keep taking letrozole. Without consulting your doctor, do not discontinue taking the letrozole tablet.

Letrozole Tablet Benefits

During Breast Cancer Treatment,

Letrozole 2.5mg Tablet can treat many types of breast cancer signs such as breast tumours, nipple discharge or changes in the shape or texture of the breast. It functions by modifying the body's hormone synthesis, which is crucial for breast cancer growth and transmission. Additionally, it might affect the progression of cancer directly or through interactions with other hormones.

Letrozole 2.5mg Tablet - Precautions

Before receiving the Letrozole Tablet,

- If you have a medicine allergy, or if any of the substances in the letrozole tablet cause you to experience a reaction, inform your doctor right once.
- Inform your doctor about any additional prescription and over-the-counter drugs, vitamins, dietary supplements, and natural remedies you are now taking or intend to use.
- Make sure you bring up any of these issues: hormone replacement therapy (HRT), hormonal contraception (birth control tablets, patches, rings, and injections), raloxifene, and tamoxifen are examples of drugs that include oestrogen.
- If you have liver infections, high cholesterol, or osteoporosis (a condition where the bones are brittle and break easily), let your doctor know.
- Letrozole 2.5 mg tablet should only be used by women who have gone through

menopause and are unable to conceive a pregnancy.

- However, you should let your doctor know if you are expecting a baby or breastfeeding before you start using this medicine. The foetus could be harmed by the letrozole tablet.
- Letrozole has the potential to make you sleepy, so be aware of it. Prior to understanding how this drug affects you, avoid using machinery or driving a car.
