What is Albendazole Tablet 400 mg?

Albendazole Tablet 400 mg belongs to the anthelmintic class of antiparasitic medications used to treat parasitic worm diseases such as neurocysticercosis (pork tapeworm infection) and cystic hydatid infection (infection caused by dog tapeworm). Roundworms, hookworms, threadworms, whipworms, pinworms, flukes, and other parasitic illnesses are also treated with Albendazole Tablet. It includes 'Albendazole,' a tubulin polymerization inhibitor. The parasite's metabolism is disrupted, and its energy stores are depleted, resulting in immobilisation. It can destroy the helminth and cure the infection as a result.

- Even if you start feeling better, don't miss any dosages and finish the entire course of
