

# Fenofibrate Tablet 160 mg

## Product Information :

---

**Pharmaceutical form :** Tablet

**Category :** Prescription Medicine

**Pack :** 1x10/Tabs

**Brand name :** Fenofibrate

**Content :** Fenofibrate (160mg)

**Therapeutic Use :** To reduce and treat high cholesterol and triglyceride (fat-like substances) levels in the blood

## Product Description :

---

### What is Fenofibrate Tablet 160 mg?

Fenofibrate Tablet 160 mg is used in combination with a low-fat diet, exercise, and occasionally other medications to lower the levels of fatty substances in the blood, such as triglycerides and cholesterol, and to raise the levels of HDL (high-density lipoprotein). The accumulation of cholesterol and lipids along the artery walls reduces blood flow and, as a result, oxygen flow to the heart, brain, as well as other organs of the body. Cardiovascular disease, angina (chest pains), strokes, and heart problems are all increased as a result of this. Despite the fact that fenofibrate lowers fatty material levels in the blood, it has not been proven to reduce the risk of heart attacks. Fenofibrate belongs to a class of drugs known as antilipemic agents. It works by boosting the body's natural systems for removing cholesterol.

### How to Use

- Fenofibrate is available as a capsule, a delayed-release capsule, and a tablet for oral use. It's normally just taken once each day.
- Fenofibrate should be consumed with meals in some cases. If you're not sure whether or

not you should have your prescription with meals, consult your doctor.

- Your doctor would most probably begin you on a usual dose of Fenofibrate Tablet 160 mg and adjust it as needed depending on the outcomes of laboratory tests to determine the level of fatty compounds in your blood. If your testing results do not improve after two months, your doctor may advise you to stop accepting fenofibrate.
- Do not break, chew, or crush the delayed-release pills; they must be swallowed whole.
- If you're taking Triglide, don't take any tablets that have been chipped or broken.
- Only if you continue to gain fenofibrate will you see a reduction in the level of fatty compounds in your blood. Even though you feel healthy keep taking fenofibrate. Do not discontinue taking fenofibrate without first consulting your doctor.

#### **Precaution - Fenofibrate Tablet 160 mg**

- If you are sensitive to any fenofibrate medicine, other drugs, or any of the substances in the fenofibrate medicine you are taking, notify your doctor immediately.
- Tell your doctor about any prescription or OTC medications, vitamins, nutraceuticals, or herbal products you're using or planning to take. Your specialist may need to adjust your prescription dosages or keep a close eye on you for side effects.
- If you're taking a bile acid resin-like cholestyramine, colesevelam, or colestipol, take 60 minutes or 4-6 hours before taking fenofibrate.
- If you have kidney, liver, or gallbladder problems, tell your doctor. Your doctor will most likely advise you against taking Fenofibrate Tablet 160 mg.
- Inform your doctor if you drink a lot of alcohol or have ever drunk a lot of alcohol, and if you have diabetes or hypothyroidism.
- If you have a pregnancy or planning to become pregnant, notify your doctor. Call your doctor when you become pregnant while getting fenofibrate.
- If you're breastfeeding, let your doctor know. While using fenofibrate, you should not breastfeed.

#### **Benefits of Fenofibrate**

The fenofibrate Tablet successfully lowers your body's elevated cholesterol levels. Lowering cholesterol levels lowers the risk of heart disease and helps you stay healthier for longer. To maximise the effectiveness of this treatment, take it on a regular basis and make necessary lifestyle modifications (such as eating healthier foods and being active). Even if you are feeling healthy, keep taking it.

#### **Side Effects of Fenofibrate Tablet**

The majorities of side effects are minor and will go away as your body adapts to the medication. If they don't go away or you're concerned about them, see your doctor.

- Remember that your doctor provided Fenofibrate Tablet 160 mg because he or she believes the advantage to you exceeds the risk of adverse effects. The majority of people who take this medicine do not have any substantial adverse effects.
- Gallstones and liver issues are rare side effects of this medicine. Tell your doctor straight away if you experience any of the following uncommon but significant adverse effects: Lack of appetite, stomach pain, yellowing eyes-skin, and black urine are all symptoms of chronic nausea and vomiting.
- This medication has a small chance of causing muscular issues. If you experience any of the following symptoms, contact your doctor straight away: muscle pain/tenderness/weakness, indications of kidney issues.
- Rarely, this medicine has resulted in a significant reduction in HDL ("good") cholesterol levels. This is the exact opposite of what your HDL levels should be doing (paradoxical reaction). Check your High - density lipoprotein on a regular basis.
- If you experience any severe side effects, such as easy bleeding or bruising, or unusual exhaustion, contact your doctor immediately.
- If you experience any really significant side effects, such as chest pain, abrupt pain/redness/swelling in the leg, or symptoms of infection (persistent sore throat, fever, enlarged lymph nodes, chills, or cough), seek medical treatment immediately away.

#### **Some Tips for Fenofibrate**

- It's best to take Fenofibrate Tablet 160 mg with food.
- While using this medicine, avoid drinking alcohol.

- Your doctor may do a liver function test before you begin therapy and on a frequent basis after that. If you're feeling more exhausted than normal, don't feel hungry, or have yellow eyes, skin, or urine, call your doctor.
- If you have muscle discomfort, tenderness, cramps, or fatigue while using a fenofibrate Tablet, tell your doctor, especially if it is followed by a fever.
- Even if you start feeling better, do not stop taking the fenofibrate Tablets without informing your doctor.

#### Fenofibrate Tablet 160 mg Supplier

Healthiza is one of the leading Fenofibrate Tablet 160 mg supplier and manufacturer, offering the best quality medicine globally through a validated cold chain secure shipment process. We use this process to manufacture, store and deliver medicines at a very specific temperature. Customers can avail of this premium quality pharma product at an affordable price from us.
