**Pharmaceutical form :** Capsule

**Category :** Prescription Medicine

**Pack :** Box

**Brand name :** ALENCRIT-D3

**Content :** Etadolac Thiocolchicoside

**Therapeutic Use :** Bones stay as strong as possible.

## Product Description :

---

### What is Esomeprazole + Domperidone Capsule?

The combination medicine Esomeprazole + Domperidone capsule belongs to a group of gastrointestinal agents which is used in the treatment of acidity, heartburn, gastroesophageal reflux disease (GERD), nausea, vomiting, indigestion, epigastric pain, and peptic ulcers. It is a sustained-release formulation that keeps the medicine in your system for longer.

#### How it Works

Esomeprazole (proton pump inhibitor) and Domperidone (diuretic) are combined in Esomeprazole + Domperidone (a dopamine antagonist). Esomeprazole acts by inhibiting a gastric proton pump enzyme, which is important for acid production. Domperidone works by improving stomach muscle contractions and motions. The combination of Esomeprazole + Domperidone aids in the treatment of acidity-related issues.

#### How to Use

- It is recommended to take Esomeprazole + Domperidone Capsule at least 60 minutes before eating. Do not chew or break the capsule; swallow it whole with a glass of water.
- Esomeprazole + Domperidone should be used for as long as your doctor prescribes it, according to your health condition.

#### **Precaution - Esomeprazole + Domperidone Capsule**

- If you are allergic to this medicine, have serious kidney or liver problems, or if you are about to receive Chromogranin, tell your doctor before using it.
- If you have osteoporosis, consult your doctor before consuming this capsule: Long-term use of this medicine may raise the risk of bone fractures.
- If you have a pregnancy or are breastfeeding, inform your doctor before taking it.
- Because Esomeprazole + Domperidone can make you dizzy, you should only drive if you are fully aware.
- It is not advisable for children.
- Drinking alcohol while taking Esomeprazole + Domperidone capsule can cause sleepiness and increase stomach acid production.
- To rule out any negative effects, keep your doctor updated about your medical condition and drugs.

#### **Side Effects For Esomeprazole & Domperidone**

- The majorities of side effects are minor and will go away as your body adapts to the medication. If they don't go away or you're concerned about them, see your doctor.
- You may encounter common side effects like dry mouth, stomach pain, diarrhoea, headache, and flatulence in some circumstances. The majority of these adverse effects do not necessitate medical treatment and will subside with time. However, if you are experiencing these adverse effects on a regular basis, you should consult your doctor.

#### **Some Tips for Using Esomeprazole + Domperidone**

- For the treatment of acidity and heartburn, you've been recommended the combination

medicine Esomeprazole + Domperidone capsule.

- It should be taken one hour before a meal, ideally first thing in the morning.
- It is a well-tolerated drug that provides long-term comfort.
- If you have watery diarrhoea, a fever, or persistent stomach pain, contact your doctor.
- If you don't feel better after 14 days, consult your doctor because you could be suffering from another problem that needs care.
- Long-term use can result in brittle bones and a mineral deficit, such as magnesium. Take calcium and magnesium supplements or calcium and magnesium supplements as directed by your doctor.
