Pharmaceutical form : Capsule

Category : Anti Cancer

Pack : 1x30/Cap

Brand name : Lenalidomide Capsules

Content : Lenalidomide (10mg)

Therapeutic Use : Multiple myeloma & Lepra reaction

Product Description :

What are Lenalidomide Capsules?

Lenalidomide capsules are a type of medicine that is used to treat multiple myeloma and the lepra syndrome.

How Does it Work?

Lenalidomide is a cancer-fighting drug. It works by boosting the immune system, which then targets cancer cells indirectly. It stops the tumour from developing new blood vessels. Lenalidomide capsules inhibit the synthesis of chemical messengers (cytokines and growth factors) that promote cancer cell proliferation. This is how cancer is remedied.

How to Use Lenalidomide

- Take this prescription medication by mouth once a day, with or without food, as instructed by your doctor. This drug should be swallowed whole with water.
- You may be told to take Lenalidomide capsules in cycles for the treatment of certain diseases (once daily for 21 days, then stop the medication for 7 days). Please follow your

doctor's instructions carefully.

- Do not open, break or chew the medicine, and do not handle them more than is absolutely necessary. If you get any of the capsule powder on your skin, wash it off with water and soap.
- Women who are pregnant or may become pregnant should not handle or breathe the particles from broken capsules since this substance can be ingested into the lungs and may harm an unborn baby.
- To receive the best benefit from this drug, take it on a daily basis at the same time every day.

Lenalidomide Capsules- Side Effects

- Diarrhoea, stomach pain, vomiting, appetite loss, constipation, drowsiness, dry skin, dry mouth, and difficulty sleeping are all possible side effects.
- If you experience any serious side effects, such as depression, increased thirst/urination, tremor, numbness/tingling of arms/legs, fast/slow/irregular heartbeat, or symptoms of heart problem, contact your doctor right away.
- Because of the quick death of cancer cells, lenalidomide capsules might induce negative effects (tumour lysis syndrome). Your doctor may prescribe medicine and advise you to drink lots of fluids to reduce your risk.
- Contact your doctor right away if you have a fever, pain, or a rash. Many people benefit from this medication since it allows them to live longer.
- If you have any symptoms of liver problem such as nausea/vomiting, severe stomach pain, yellowing eyes/skin, or dark urine, seek medical attention immediately away.
- Consult your doctor if you have any other side effects not listed above.

Some Tips for Lenalidomide

- lenalidomide capsules might cause a drop in white blood cells and platelets. You may be examined with routine blood tests during therapy.
- Avoid bruising or injury-prone activities, as well as interaction with people who have colds

or illnesses.

- It makes your body more susceptible to the sun. When going out, use sunscreen or wear protective clothing.
- It has the potential to dehydrate you. Drink plenty of fluids while taking medicine by drinking plenty of water.
- It is not suggested for children and teens under the age of eighteen.
- You should take effective contraception for at least 4 weeks before starting treatment, during treatment, and for at least 4 weeks after discontinuing treatment.
- Pregnancy testing will be compulsory for all women of childbearing age.
- Before receiving any medical or dental care, emergency care, or surgery, tell your medical professional or dentist that you are receiving Lenalidomide capsules.
- It can make you feel dizzy or sleepy. Do not drive or do anything else that requires attention until you have a better understanding of how it affects you.
