Pack : 1x30/Cap

Brand name : MyHep Tablet

Content : Sofosbuvir (400mg) + Velpatasvir (100mg)

Therapeutic Use : Treatment of Chronic hepatitis C virus (HCV) infection

## Product Description :

---

### What is MyHep Tablet?

Myhep Tablet is a medicine that combines two antiviral drugs (Sofosbuvir + Velpatasvir). This prescription medication is used to treat chronic hepatitis C virus infection (HCV). It attacks viruses in order to get rid of the infection.

### Myhep Tablet - How To Use

Take this medicine by mouth once a day, with or without food, as instructed by your doctor. The dosage for children is determined on their age and weight. To improve the flavour of the drug, the manufacturer suggested that children smaller than 6 years old use the pellet form with food.

- Take this medication at regular intervals. Use it at the same period of time every day to help you remember.
- Even if symptoms go away after a short time, keep taking sofosbuvir/velpatasvir for the whole period. Stopping the medicine too soon may cause the infection to recur.

- Antacids reduce velpatasvir absorption. If you're taking an antacid, wait at least four hours before or after having this medicine before taking it.
- Other acid-lowering drugs for indigestion, reflux, or ulcers (such as famotidine, omeprazole, and other prescription or over-the-counter treatments) may inhibit velpatasvir from functioning.

Consult your doctor for instructions about how to use these medicines safely.

#### **Myhep Tablet - Benefits**

### **In Treatment of Chronic hepatitis C virus (HCV) infection**

The hepatitis C virus causes a liver infection called hepatitis C. (HCV). Hepatitis c Virus virus infection occurs when the infection progresses to a long-term stage. Myhep Tablet works by stopping the hepatitis C virus from developing throughout your body. This aids in the control of the illness and allows you to recover more quickly. It is essential that you consume this medication exactly as directed by your doctor, including the dosage.

#### **Myhep Tablet - Precautions**

- If you are sensitive to sofosbuvir or velpatasvir, or if you have other allergy, notify your doctor before taking the medicine. Inactive chemicals may be included in this product, causing allergies or other issues.
- Before taking this drug, inform your doctor about any previous medical conditions you've had, especially if you've had other liver disorders (such hepatitis B) or diabetes.
- When you have diabetes, hepatitis C treatments that can help lower your blood sugar. As a result, your doctor may change your diabetes medication plan to reduce your possibility of low blood sugar. If you suffer signs of low blood sugar, such as abrupt perspiration, shaking, rapid heartbeat, hunger, vision problems, dizziness, or tingling hands/feet, call your doctor straight once.
- Tell your doctor about all the products you consume before surgery (including prescription, nonprescription, and herbal drugs).
- Children are more vulnerable to the drug's negative effects, particularly vomiting.
- This medicine should only be taken during pregnancy if absolutely necessary. Consult

your doctor about the dangers and advantages. Neither the pregnant lady nor her male partner should take sofosbuvir/velpatasvir in conjunction with ribavirin during pregnancy. The combination has the potential to harm an unborn child. When at least one individual partner is taking these drugs concurrently, and for six months after completing therapy, two dependable means of birth control (condoms, birth control tablets) must be used. Speak to your doctor immediately once if you or your partner become pregnant, or if you suspect you or your companion may be pregnant.

- This drug does not appear to transfer into breast milk. Before you start breastfeeding, talk to your doctor. If you're using this drug, you shouldn't breastfeed.

#### **Myhep Tablet - Side Effects**

- Tiredness, headaches, nausea, diarrhoea, and difficulties sleeping are all possible side effects. Tell your doctor immediately if any of these side effects continue or worsen.
- Remember that your doctor provided this medication because he or she believes the advantage to you exceeds the risk of adverse effects. The majority of people who take this medicine do not have any substantial adverse effects.
- If you have any major side effects, such as mood swings (depression), or extreme tiredness, contact your doctor straight away.
- This medicine rarely causes a severe allergic reaction. However, if you detect any symptoms of a major allergic response, such as a rash, itching/swelling, severe dizziness, or trouble breathing, seek medical attention immediately.
- This isn't a full list of potential adverse effects. Contact your doctor if you experience any other side effects not listed above.

#### **Myhep Tablet - Some Tips For Use**

- The Myhep All Tablet is prescribed to treat chronic hepatitis C virus infection (HCV).
- Take it with food and at the same time every day if possible.
- This medicine will normally need to be taken every day for 3 to 6 months.
- The likelihood of treatment failure rises when dosages are skipped. Sure to take all of

your medicines at the same time.

- Fatigue, dizziness, and vision problems are all possible side effects. Don't drive or do anything else that requires attention until you have a better understanding of how it affects you.
- It's possible that taking Myhep Tablet can give you a headache. Drink lots of fluids and take a pain reliever that suits your needs. If it doesn't go away, consult your doctor..
- Your liver functionality and the presence of hepatitis C virus in your system may be monitored by your doctor on a regular basis.
- Do not stop using this medication without consulting your doctor.
