Content : Bifonazole Cream 1.0% w/w

Therapeutic Use : Fungal skin infections

Product Description :

What is Bifonazole Cream?

Bifonazole Cream is a topical antifungal that is used in the treatment of fungal infections. When a fungus enters and affects skin tissue, it is called an infection. Fungi can be found in the air, ground, water, and plants, among other places. Skin rash, itching, redness, and scaling are all signs of a fungal infection.

How it Works

It contains 'bifonazole,' an antifungal from the imidazole family that kills fungus by producing holes in their cell membranes, allowing all of their contents to flow out. As a result, Bifonazole helps to treat your skin infection. Cream, dusting powder, and gel forms of Bifonazole Cream are available. Use it as directed by your doctor.

How to Use

- Apply the cream to infected skin that is clean, dry, and unbroken. It should be applied once or twice a day, or as directed by your doctor.

- Bifonazole Cream should not be used on the face, and it should be kept away from the eyes, mouth, and nose.
- While using it, do not apply a bandage or dressing to the affected region unless your doctor advises you to.
- With clean and dry hands, apply a small amount of the medicine solely to the affected parts of the skin. Rinse with water if it goes into the eyes, nose, mouth, or vaginal area.

Benefits of Bifonazole

In fungal Infections,

- Bifonazole Cream is made up of 'bifonazole,' an antifungal that belongs to the imidazole family and is used in the treatment of fungal infections. It kills fungus by producing holes in their cell membranes, allowing all of their contents to escape. As a result, It helps to treat your skin infection. This medication is used to treat fungal diseases such as oral thrush and skin infections such as jock itch and Athlete's foot.

Precautions - Bifonazole Cream

- If you are sensitive to Bifonazole, tell your doctor. Before using it, inform your doctor if you're taking any other azole antifungal. Otherwise, you could end up with an overdose and toxicity.
- If you have liver disease, renal disease, heart disease, or the human immunodeficiency virus, tell your doctor.
- This medication with its mineral oil ingredient may reduce the effectiveness of rubber contraceptive devices such as latex condoms, dampers, and cervical caps.
- It should be used with caution and care by pregnant and nursing women.
- This Cream should not be used on the face, and it should be kept away from the eyes, nose, and throat. If you ever get the cream in such locations, thoroughly rinse it out with water.
- While taking Bifonazole Cream, do not apply a bandage or dressing to the affected region unless your doctor advises you to. Hands should always be washed before and after

applying it.

Side Effects of Bifonazole

- Skin rash, scaling, skin redness, and dry skin are all common side effects of Bifonazole Cream.
- These adverse effects do not necessitate medical treatment and will pass away with time. Please contact your doctor if these side effects continue.

Some Tips for Using

- When taking a bath, use mild soap and opt for a warm bath.
- stay away from harsh products for your skin
- To avoid infecting the affected area, do not scratch or pick at it.
- Manage your stress, eat well, drink enough water, exercise daily, and sleep well.
- Even though you feel better, complete the entire course of treatment.
- The infection will heal in a few weeks, and the skin will return to its original colour in a few months.
- Bifonazole Cream can induce localized skin irritation that mimics the symptoms of an illness. Stop taking the medication and consult your doctor immediately if any of your problems worsen.
