

Fluticasone Cream 0.05% w/w

Product Information :

Pharmaceutical form : External Preparation

Category : OTC

Pack : 1x15gm

Brand name : Fluticasone Cream

Content : Fluticasone Cream 0.05% w/w

Therapeutic Use : Severe allergic reactions &
Treatment of Skin conditions with inflammation &
itching

Product Description :

What is Fluticasone Cream?

Fluticasone cream is used to treat psoriasis (a skin disease in which red, scaly patches appear on some parts of the body) and eczema by reducing inflammation and relieving itching, redness, and dryness, and scaling. Fluticasone belongs to the corticosteroid family of drugs. It reduces swelling, redness, and itching by stimulating natural chemicals in the skin.

How to Use

- Fluticasone topical is available as an ointment, cream, or lotion for skin application. It's often used once or two times a day. Carefully follow the advice on your medication label.
- Unless your doctor instructs you otherwise, do not apply it to other parts of your body or use it in the treatment of other skin disorders.
- During the first two weeks of treatment, your skin disease should improve. If your signs do not improve during this period, contact your doctor.

- To apply fluticasone topical, use a tiny amount of cream, ointment, or lotion over the affected region of skin and gently rub it in.
- This drug should only be applied to the skin. Fluticasone cream should not be rubbed into your eyes or mouth, and it should not be swallowed.

Precautions - Fluticasone Cream

- If you have allergies to fluticasone, formaldehyde, other drugs, or any of the chemicals in fluticasone topical solutions, let your doctor know.
- Tell your doctor about any prescription and OTC drugs, vitamins, and nutraceuticals you're taking or planning to take.
- If you have a skin disease or any other skin issues, or if you have a liver illness caused by excess hormones, tell your doctor.
- If you're using fluticasone cream, wear safe clothing, glasses, and sunscreen to minimize unnecessary or prolonged contact with the sun. Your skin may become more sensitive to sunlight if you use it.

Benefits of Fluticasone

In Skin conditions treatment

- Fluticasone Cream is beneficial in the treatment of eczema, dermatitis, and psoriasis, as well as other skin disorders that cause irritation and itching. It works by inhibiting the activity of certain molecules in the body that induce skin irritation. It is a safe treatment when administered correctly. It relieves the redness, rash, soreness, and itching caused by an irritant's reaction on your skin. As a result, as your appearance changes, it boosts your self-esteem and confidence.
- Always use it according to the directions and only use the amount specified. To get the most out of it, use it for the recommended amount of time.

Side Effects - Fluticasone Cream

- When you use this medication, you may experience burning, itching, stinging, or dryness,

although this normally only lasts a few minutes. Inform your doctor immediately if any of these side effects persist or worsen.

- If you experience any major side effects, such as scars, skin thinning, acne, hair growth, or hair bumps, contact your doctor immediately.
- It's possible that this drug will be absorbed into the bloodstream through the skin. Too much corticosteroid can have negative side effects. Children and people who use this drug for a long time or across a big region of skin are more prone to experience these negative effects.

Some Tips for Fluticasone

- It is prescribed to you to treat skin irritation caused by atopic eczema, allergic skin reactions, and psoriasis, among skin diseases.
- Don't take it more often or for more than your doctor recommends.
- It should not be used on broken or infected skin, the face, eyes, or eyelids.
- Do not wrap the area being given with airtight coverings such as bandages, as this may improve the side effects.
- Avoid using Fluticasone Cream and see your doctor if you think the region of skin you're treating has become infected.
- If your skin disease has not healed after 2 weeks of treatment, see your doctor.
