What is Helobetasol Propionate Cream?

Helobetasol Propionate Cream is a type of 'dermatological agent' that is commonly used to treat skin conditions like eczema and psoriasis. Eczema is a skin ailment in which irritants such as soaps, dyes, and other irritants cause the skin to become red, itchy, and inflamed whereas Psoriasis is an autoimmune skin disease that causes scaly, swollen, and itchy skin. disease that causes scaly, swollen, and itchy skin.

How it Works

Halobetasol is a corticosteroid with anti-inflammatory, immunosuppressive, and antiproliferative (cell growth limiting) effects. It inhibits the formation of prostaglandins, which induce inflammatory signs such as red, puffy, and itchy rashes. It comes in cream and ointment forms for topical use (on the skin). You must take this medication exactly as directed by your doctor.

Precautions - Helobetasol Propionate Cream

- If you have allergies to Halobetasol,

Salicylic acid

, or any of the other components or if you have a skin disease, a skin allergy to any steroid treatment, an adrenal gland condition, liver disease, or are considering surgery, tell your doctor before using this Cream.

- It is not recommended for youngsters under the age of 12. If you have a pregnancy or are breastfeeding, tell your doctor.

Side Effects

- Itching, dryness, irritation, and burning at the site of application, stretch marks, headache, and signs of cold-like stuffy nose or sneezing are all its possible adverse effects.
- The majority of these adverse effects do not necessitate medical treatment and fade away with time. Please visit your doctor if you detect any other problems or if the adverse effects last longer.
