What is Luliconazole Cream?

Luliconazole cream is used in the treatment of tinea pedis (athlete's foot; fungal skin infection on the feet and between the toes), tinea cruris (jock itch; fungal skin infection in the groyne or buttocks), and tinea corporis (a fungal skin infection that produces a red scaly rash on different body parts). Luliconazole belongs to the azole class of antifungal medicines. It acts by inhibiting the growth of infection-causing fungus.

How To Use

- Luliconazole is applied to the skin as a cream. It is commonly used once a day for one week in the treatment of jock itch and ringworm. Luliconazole is commonly used once a day for two weeks to treat an athlete's foot.
- Use sufficient cream in the treatment of the affected area and roughly 1 inch (2.5 centimetres) of skin surrounding it to use the cream. After applying for the medicine, you need to wash your hands.

- At the start of your treatment, your symptoms should improve. Even if you're feeling fine, keep using luliconazole cream. Your infection may not be entirely treated if you stop taking luliconazole too early, your symptoms may reappear.
- Luliconazole cream should only be applied to the skin. Avoid getting luliconazole in your eyes, nose, or mouth, and avoid swallowing it.

Precautions - Luliconazole Cream

- If you have an allergy to luliconazole, any other drugs, or any of the components in luliconazole cream, notify your doctor.
- Tell your doctor about all of your prescription and nonprescription drugs, vitamins, nutraceuticals, and herbal products.
- If you ever had a medical problem, notify your doctor.
- If you have a pregnancy, planning to become pregnant, or breastfeeding, notify your doctor.

How It Works

Luliconazole is a topical antifungal that is used to treat skin infections. It acts by damaging the cell membrane of the fungi on the skin, killing them. This will take care of your skin infection.

Side Effects - Luliconazole Cream

- The majorities of side effects are minor and will go away as your body adapts to the medication. If they don't go away or you're concerned about them, see your doctor.
- It's possible that you'll get skin inflammation. Inform your doctor immediately if it persists or worsens.

Some Tips for Luliconazole

- Luliconazole cream is used in the treatment of skin infections caused by fungi of various sorts.
- Apply enough to cover the affected region as well as 1 inch of the skin immediately

surrounding it.

- The infection will heal in a few weeks, and the skin will return to its original colour in a few months.
- Even though you feel better, complete the entire course of treatment.
- Because it is not administered orally, it has few negative effects.
- It's best not to get it in your eyes, nose, or mouth. If you are accidentally exposed, quickly rinse with enough water.
- If the infection persists after 4 weeks of treatment, contact your doctor.
