

# Nadifloxacin Ointment 1% w/w

## Product Information :

---

Pharmaceutical form : External Preparation

Category : OTC

Pack : 1x1 tube

Brand name : Nadifloxacin

Content : Nadifloxacin Ointment 1% w/w

Therapeutic Use : Treatment of Bacterial skin infections

## Product Description :

---

### What is Nadifloxacin Ointment?

Nadifloxacin Ointment belongs to the fluoroquinolone antibiotic class, which is generally used in the treatment of bacterial infections on the skin, such as skin problems and acne vulgaris. A bacterial infection is an infection caused by bacteria that develop in the body. It can infect any portion of the body and multiply swiftly. The antibacterial Nadifloxacin Ointment helps cure and prevent a variety of skin bacterial infections. It acts by preventing bacteria that produce infections and is bactericidal. It stops germs from fixing themselves and kills them, stopping the infection from spreading further. Nadifloxacin is a broad spectrum type of antibiotic that kills most Gram-negative bacteria, as well as many Gram-positive bacteria and some anaerobes.

### How to Use

- This drug should only be used for external use. Use it according to your doctor's instructions for dosage and duration. Before using, read the directions on the label.
- Apply the cream after cleaning and drying the affected area. Unless your hands are in the

affected region, wash and clean your hands after applying.

#### How Nadifloxacin Works

Antibiotic Nadifloxacin is an ointment that contains the antibiotic nadifloxacin. By inhibiting bacterial cells from developing and mending, it eliminates bacteria that produce skin diseases.

#### Precautions for Nadifloxacin Ointment

- If you are sensitive to nadifloxacin or any other quinolone or fluoroquinolone antibiotics, like delafloxacin,

[levofloxacin](#)

,

[moxifloxacin](#)

, or

[ciprofloxacin](#)

, or if you have had a severe response to nadifloxacin, do not use it.

- Furthermore, while using nadifloxacin, accessibility to sunlight should be avoided because it may induce higher phototoxicity or photosensitivity.
- Avoid getting nadifloxacin in your eyes, nose, or mouth, and don't apply it to broken skin. Unless recommended by a doctor, the infected region should not be wrapped with airtight coverings such as bandages, as this may raise the chance of side effects.

#### The Benefit of Nadifloxacin

Nadifloxacin ointment is a type of antibiotic that prevents infection-causing bacteria from growing on your skin. It hinders the creation of key proteins required for bacterial viability. It works to treat skin diseases like boils, impetigo, and infected hair follicles. Nadifloxacin can also be used in the treatment of infections in minor skin cuts or wounds. This treatment has minimal typical adverse effects and should clarify infections in a few days, but you should continue to use it for the full duration of the prescription.

## Side Effects of Nadifloxacin Ointment

Nadifloxacin, like all drugs, can produce side effects, though not everyone experiences them. In some situations, you may have application site reactions such as a burning sensation, irritation, or rashes. The majority of Nadifloxacin's negative effects do not need medical treatment and fade away with time. However, if the negative effects do not go away, consult your doctor.

## Some Tips for Nadifloxacin

- Nadifloxacin ointment has been suggested to treat bacterial skin problems.
- It should be used 2 to 3 times daily in the affected regions, or as directed by your doctor.
- Don't take it longer or for more than your doctor recommends. If your skin problem does not improve after 7 days of treatment, contact your doctor.
- Medication should be continued for at least 2 days after the symptom has gone away.
- Prevent getting it in your eyes, nose, or mouth by not applying it to broken skin.
- Unless recommended by a doctor, do not cover the area being medicated with airtight coverings such as bandages, as this may increase the chance of side effects.
- The application site may experience transient burning, itching, or redness. This is usually a minor problem. If you have a more serious response, go to your doctor.
