Pack : 1x10

Brand name : Paracetamol , Ibuprofen & Caffien Capsule

Content : Paracetamol , Ibuprofen & Caffien Capsule (325+200+30 mg)

Therapeutic Use : Chronic Pain Reliever

Product Description :

What is Paracetamol, Ibuprofen & Caffeine Capsule?

Paracetamol, Ibuprofen & Caffeine Capsule is non-steroidal anti-inflammatory drugs (NSAID). It's used to treat arthritis, primary dysmenorrhea, fever, and as an analgesic, especially in cases when there's a lot of inflammation. When compared to aspirin or other well-known antiplatelet medicines, ibuprofen's antiplatelet impact is moderate and short-lived. Paracetamol, is an over-the-counter analgesic (pain reliever) and antipyretic (fever reducer). It's used to treat headaches, migraines, muscle aches, arthritis, backaches, toothaches, colds, and fevers, among other things. Caffeine, the most prevalent stimulant in the world, is utilized in this medicine mixture to speed up the drug's action.

Usage of The Medicine

- Gout is treated with paracetamol, which is also used as an antipyretic in cases of fever.
- Ibuprofen is used to treat rheumatoid arthritis, ankylosing spondylitis, gout, and joint problems such as osteoarthritis. It is also used to treat fever, dental inflammation and discomfort, minor surgery, dysmenorrhoea, and migraine.

- Caffeine is used to treat orthostatic hypotension, short-term treatment of newborns with apnea of prematurity, exhaustion and drowsiness, analgesia, and respiratory depression.
- It is not recommended to take Paracetamol, Ibuprofen & Caffeine Capsule during pregnancy or nursing since taking this medication during the last three months of pregnancy may harm the unborn baby. It's also found in breast milk. Before taking it, talk to your doctor.

Precaution - Paracetamol, Ibuprofen & Caffeine Capsule

Do not take this medication, if

- You have an allergy to the medicine or any of its components.
- You have influenza (flu) or chickenpox as a child or teenager.
- You have a bleeding disorder such as haemophilia, von Willebrand disease, or a low blood platelet count.
- You've experienced a severe allergic reaction to aspirin, tartrazine, or a nonsteroidal anti-inflammatory medicine (NSAID) (celecoxib,

[ibuprofen](#)

, naproxen)

- You're using an NSAID or another acetaminophen-containing medication.
- It is not recommended to take Paracetamol, Ibuprofen & Caffeine Capsule during pregnancy or nursing since taking this medication during the last three months of pregnancy may affect the unborn baby.

How it Works

Ibuprofen + Paracetamol + Caffeine is a mixture of two pain reliever medications (Ibuprofen and Paracetamol) and a stimulant (caffeine). Pain reliever medications operate by preventing the release of chemical signals in the brain that produce inflammation and pain (redness and swelling). The potency of paracetamol/acetaminophen is increased when caffeine is present.

Side Effects of Paracetamol, Ibuprofen &

Caffeine

- Paracetamol, Ibuprofen & Caffeine Capsule, like any medications, might cause certain unpleasant side effects. Before using, always seek medical advice from a doctor or other health care expert. Stomach pain, heartburn, dizziness, rash, drowsiness, nausea, vomiting, diarrhea, and ringing in the ears are some of the most common adverse effects.
- If you have changes in your eyesight, breathing trouble, swelling, or rapid weight gain, skin rash, symptoms of stomach bleeding, liver issues, renal difficulties, anemia, or a severe skin response, seek medical assistance. Consult your doctor for a complete list of all potential side effects.
- Please contact your doctor right once if any symptom persists or worsens, or if you notice any other symptoms.

Some Tips for Using

- This drug is a combination of pain relievers, anti-inflammatory, and fever reducers.
- To avoid an upset stomach, take it with food.
- It can make you feel dizzy and sleepy. Don't drive or do anything else that takes mental focus until you have a better understanding of how it affects you.
- When using Paracetamol, Ibuprofen & Caffeine Capsule, avoid drinking alcohol because it may produce excessive drowsiness and raise the risk of liver damage.
- Without first seeing your doctor, do not combine it with any other paracetamol-containing treatment (pain relievers, fever reducers, or cough and cold medicines).
- Follow your doctor's instructions for dosage and duration. Long-term use may cause gastric bleeding as well as kidney issues.
