Product Information :

Pharmaceutical form : Tablet

Category : Prescription Medicine

Pack : 1x10

Brand name : Quetiapine

Content : Quetiapine Tablets 100 mg

Therapeutic Use : Treatment of Schizophrenia and Mania

Product Description :

What is Quetiapine Tablet 100 mg?

Quetiapine Tablet 100 mg is used in the treatment of schizophrenia symptoms (a mental illness that produces disturbed or abnormal thinking, loss of interest in life, and strong or inappropriate emotions). It is also used to treat mania (an unusually enthusiastic or irritable mood) and depression in bipolar disorder patients, either alone or in combination with other drugs (manic depressive disorder; a disease that produces depression, episodes of mania, and other abnormal moods). Quetiapine belongs to the atypical antipsychotic class of drugs.

How to Use Quetiapine

- Quetiapine is available as a tablet to be swallowed. The tablets should be taken 1 to 3 times daily, with or without food. Every day, take quetiapine at the same time(s).
- During the first week of treatment, your doctor will likely start you on a smaller dosage of Quetiapine Tablet 100 mg and gradually raise it.
- If you have not taken quetiapine for a week or more, you should contact your doctor

before restarting your treatment. Your doctor would most likely advise you to start with a low dose and gradually raise it, just like you did when you initially started on quetiapine.

- Quetiapine tablets may help you manage your symptoms. Even though you feel fine, keep taking quetiapine. Do not discontinue taking quetiapine without first consulting your doctor. You may suffer withdrawal side effects such as nausea, vomiting, and trouble falling or staying asleep if you stop taking quetiapine suddenly.

Precaution - Quetiapine Tablet 100 mg

- If you have an allergy to quetiapine or any other drugs, or any of the substances in quetiapine tablets, tell your doctor.
- Tell your doctor about any prescription and nonprescription medications, vitamins, nutraceuticals, and herbal products you're using or planning to use. Your doctor may need to adjust your prescription dosages or keep a close eye on you for adverse effects.
- If you or anybody in your family has or has ever had diabetes or a prolonged QT interval, notify your doctor (a heart problem that may produce abnormal heartbeat, fainting, or sudden death).
- Inform your doctor if you have or have ever had low potassium or magnesium level in your blood, a low number of white blood cells, difficulty emptying your bladder completely, any condition that makes swallowing difficult, difficulty keeping your balance, seizures, high blood cholesterol, high prolactin levels, an enlarged prostate, high or low blood pressure, a heart problem, a stroke, breast cancer, or thyroid, heart, or liver disease.
- If you have a pregnancy, especially if you are in the last several months of your pregnancy, planning to become pregnant, or breastfeeding, tell your doctor.
- You should be aware that this medicine may reduce female fertility.
- You should be aware that quetiapine can cause drowsiness. Do not drive or operate machinery until you have a better understanding of how this drug affects you.
- It's important to be aware that quetiapine tablets can make it more difficult for your body to cool down when it becomes too heated. Excessive exercise should be avoided.
- It's important to be aware that quetiapine can induce a blood pressure increment in children and teenagers.

Benefit - Quetiapine Tablet

In Schizophrenia Treatment

Schizophrenia is a mental illness in which a person's ability to think, feel, and behave effects abnormally. Quetiapine Tablet 100 mg works to correct the biochemical imbalances in the brain that cause these alterations. It improves one's thinking, behaviour, and overall quality of life.

In Mania Treatment

Mania refers to an excessively elated or heightened state of mind. Quetiapine tablet helps to relax the nerves and quiet the mind. This helps to stabilize the mood and stops mania symptoms from returning. You will have a better social life and be able to accomplish everyday activities more comfortably if you take quetiapine.

Side Effects of Quetiapine

The majorities of side effects are minor and will go away as your body adapts to the medication. If they don't go away or you're worried about them, see your doctor.

- Constipation, drowsiness, stomach trouble, weariness, weight gain, vision problems, and dry mouth are all possible side effects. Tell your doctor if any of these side effects persist or worsen.
- This medicine may cause dizziness or lightheadedness, especially when you initially start or increase your dose.
- If you have any of the following adverse effects: restlessness, shakiness, mental changes, continuous vomiting, lack of appetite, yellowing eyes/skin, or sleep interruption, contact your doctor immediately. If you have any very significant adverse effects, such as fainting, seizure, or severe dizziness, seek medical attention immediately.
- Quetiapine Tablet 100 mg may induce or improve diabetes by causing or increasing blood sugar levels. When you already have diabetes, monitor your blood sugar as advised and inform your doctor of the results.
- This medication may induce considerable weight gain as well as an increase in blood cholesterol levels.
- Quetiapine tablets may cause your body to produce more of a natural chemical called prolactin. This rise in prolactin in females can lead to unnecessary breast milk, missed periods, and problems conceiving.
- Males may experience diminished sexual ability, failure to generate sperm, or larger breasts as a result of this condition.

Some Tips for Using Quetiapine

- Quetiapine Tablet 100 mg has been used to treat schizophrenia and mania.

- It is less likely than other antipsychotics to induce cardiac issues and movement difficulties.
- Treatment effects may take four to six weeks to show. Continue to take it as directed.
- Because Quetiapine Tablet can cause dizziness and tiredness, take caution while driving a vehicle or doing anything that demands concentration.
- If you've been sitting or lying down, carefully stand to reduce the risk of feeling dizzy or falling down.
- It has the potential to raise your weight, blood sugar, and cholesterol levels. Eat well, exercise regularly, and check your blood pressure on a regular basis.
- If you experience any unexpected changes in mood or behaviour, new or severe depression, or thoughts of suicide, contact your doctor.
- If you stop consuming it without first consulting your doctor, your symptoms may worsen.
